The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Baile et al.

Baile et al., U.S. Patent 4,492,415, teach roller bearings wherein the matrix of the bearing component is composed of a solid, tough, elastic gel comprising lubricating oil and a high molecular weight polymer (column 3, lines 20-30). In Example 2, column 7 of Baile et al., the lubricating oil is synthetic hydrocarbon oil which has a viscosity of 33 mm<sup>2</sup>/s at 38° C. Conventional lubricating additives such as nylon or Teflon powder and molybdenum disulfide may also be incorporated in the matrix in known manner (column 8, lines 37-40).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Baile et al.

Baile et al. is relied on as cited above. While Baile et al. do not disclose the amount of conventional lubricating additives to be added to the lubricating matrix, it would have been obvious and well within the ability of the skilled artisan to determine the optimum amounts of said known lubricant additives to achieve their recognized desired effects on lubricants. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
